

2026

SURGICAL MENTOR RESIDENT PROGRAM

April 24-25
Orlando, Florida

INTRODUCING A DIFFERENT KIND OF PROGRAM

Bausch + Lomb established the Surgical Mentor Resident Program to provide residents with a valuable hands-on educational experience. During this program, residents will learn cataract and refractive surgical techniques and tips from some of the nation's leading ophthalmic surgeons. The low student-to-faculty ratio helps ensure that residents have a personalized and engaging experience with their faculty mentors.

PRIOR ONLINE AND FLIPPED CLASSROOM LEARNING

With the rise of technology and the swift expansion of online learning, the program incorporates brief, self-administered videos to instruct participants before they attend the course. This approach minimizes the reliance on traditional lectures during the program, fostering active-learning via case-based and situation-based elements in the program.

EXTENDED HANDS-ON WET LAB EXPERIENCE

Participating in one of the most anticipated activities of the program, residents will have an extensive dedicated time to practicing what they've learned using the Stellaris Elite® surgical platform.

PERSONALIZED INSTRUCTION FROM LEADING OPHTHALMIC SURGEONS

Throughout the morning, faculty will present case studies and informative lectures on the fundamentals of cataract and refractive surgery techniques that residents can later put into practice during the afternoon wet lab.

**EDUCATING FOR THE FUTURE.
INVESTING IN YOU.**
